

IM SERIES

LIFT TRUCK SAFETY AND IMPACT MANAGEMENT

Defender IM Series

Impacts are a common occurrences in most material handling operational facilities. When they are not managed, they can adversely affect both operator safety and operating costs as a result of downtime and damages. Vehicle impacts systems have been on the market for several years with limited success. The reason that most systems fail is that focusing entirely on impacts does not solve core problems. Creating safe and cost responsible work environments Defender onboard lift truck management systems will help drive accountability to your fleet. Modular in design, the IM allows you to select only options that benefits your business today and add functions needed for tomorrow.

RF Base Station

Order Number	Functions
IM2K	Keypad operator access control with OSHA / Pre-shift safety check, impacts detection and USB port
IM2R	RFID operator access control card reader, OSHA / Pre-shift safety check, impacts detection and USB port
IM3K	Keypad operator access control with OSHA / Pre-shift safety check, USB port and RF module for communication with Base Station
IM3R	RFID operator access control card reader, OSHA / Pre-shift safety check, impacts detection, USB port and RF module for communication with Base Station
IM4	Keypad operator access control with OSHA / Pre-shift safety check, impacts detection, USB port and multiple colour lights alert (<i>Vehicle operation not disabled</i>)
